

Remote reader for a code for apartment vG-BLreader 2

REMOTE READER

The basic task of the vG-BLreader2 reader is to supervise and grant access to the selected object to people from any place and at any time. The apartment code reader allows you to secure external doors using an electric strike, electromagnetic lock, sliding doors or garage doors. It is perfect for apartments, flats and all rental rooms that we do not have daily access to, but we want to have control over them. The operation is intuitive and very easy to learn. The administrator gives the selected person the right to open by generating a code and sending it via SMS. The code reader is operated with the TTlock application, in which you can generate codes for a specified period of time, add proximity cards, check the history of events, check the statistics of entries and presence of the user. The device we offer is easy to install and has an IP66 protection degree.

Dimensions

TECHNICAL DATA

Model	vG-BLreader2
Dimensions	79x125x15,5 mm
Access	TTlock APP, PIN code, Mifare card 13,56MHz, fingerprint (to order)
Material	Aluminium, tempered glass
Reading range	0-10 mm
Reading time	~ 1.5s
Internal memory	For 1000 users / 20,000 cards
Protection	IP66
External power supply	12 V DC
Relay for controlling the actuator	500mA
Working temperature	-20 up to +70°C
Communication	Bluetooth 4.1
Warranty	2 years
