

Information regarding changes in the TTLock application

Dear Sir or Madam,

We would like to inform you that as of **July 1, 2026**, the manufacturer of the TTLock system has introduced changes to the rules for using the TTLock application.

The changes include the introduction of limitations in the free version of the application. Until now, selected functions, including the ability to create access codes, were available without restrictions. After the changes, the number of newly created **CUSTOM** access codes in the free version of the application has been limited to **5 codes per month for one device**.

This limitation may be particularly important for users who regularly grant temporary access, manage a larger number of users, generate codes for guests, or use TTLock locks as part of their business operations.

If you need to use a wider range of functions or generate a larger number of access codes, paid plans offered by the manufacturer of the TTLock application are available.

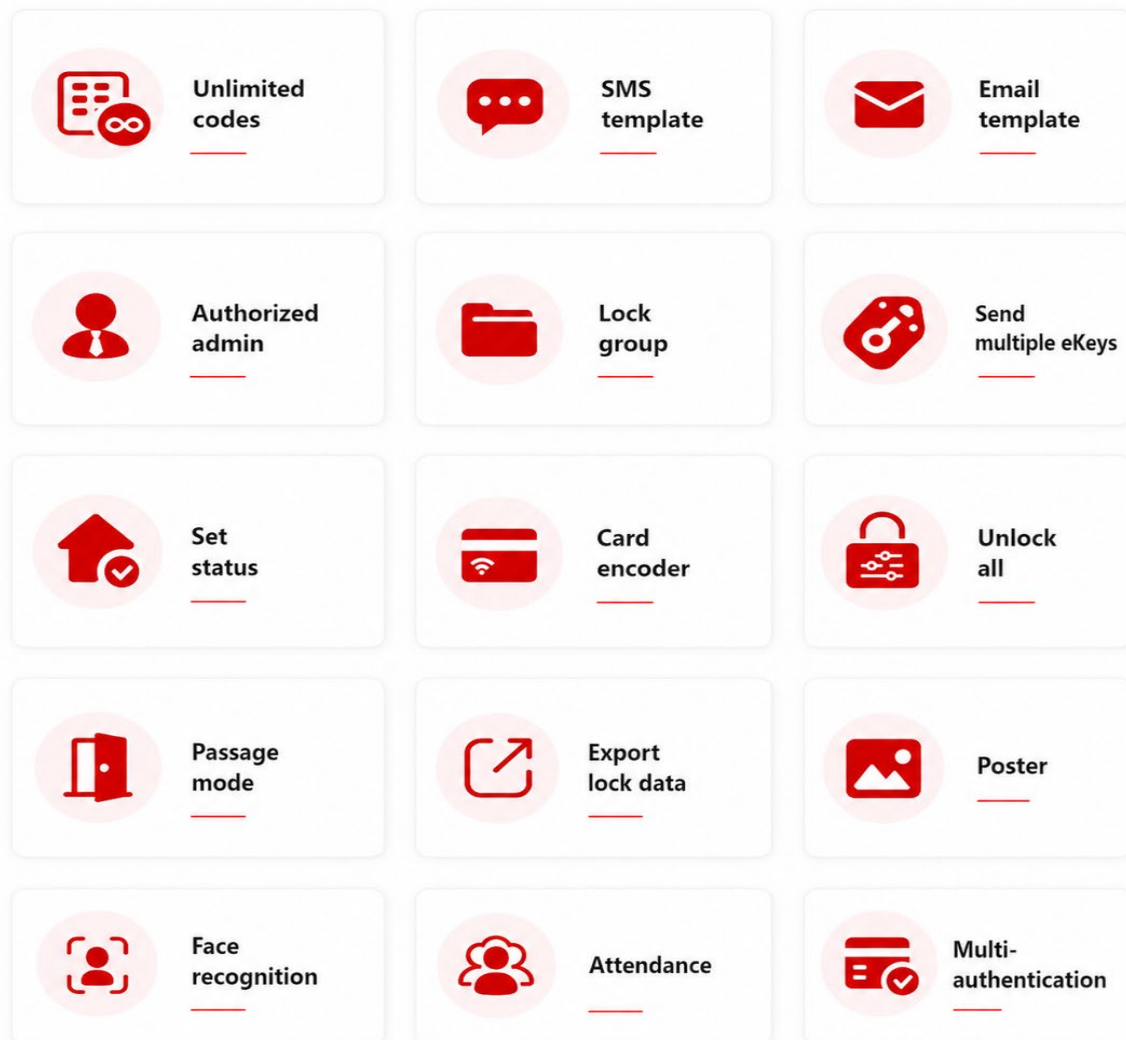

We encourage you to review the changes and adjust the way you manage access permissions to the new rules of using the application.

Benefits of upgrading to the paid version

The paid version provides:

- unlimited creation of access codes,
- simultaneous sending of multiple eKeys,
- bulk granting of access permissions,
- creation and management of lock groups,
- adding administrators to multiple locks,
- more convenient management of a larger number of facilities, units or rooms,
- personalization of SMS and e-mail messages sent to users directly from the application,
- sending eKey or access code information via SMS or e-mail,
- management of room or premises status,

- use of the Attendance function for recording presence and controlling employee entries,
- support for an access card encoder, provided that the system and devices support this function in offline mode,
- extended Passage Mode function, allowing the lock to be temporarily left in passage mode,
- the ability to hide expired access permissions,
- importing permissions from one lock to another,
- access to additional administrative functions for users managing a larger number of locks.
