

Digilock Cabinet Lock

Aspire RFID

Digilock Aspire RFID Cabinet Lock is a proven solution that operates with Mifare 13.56 MHz cards and works perfectly in both new and retrofit installations. The lock is managed via electronic keys, which allow adding or removing user cards and opening the locker in case a code is forgotten. Operation is simple for both the user and the administrator. The lock is available in two versions: Basic and Advanced (the latter available at an additional cost). The Advanced version allows management through a dedicated tablet with an application that provides full control of the locks. Powered by a long-life battery, the lock ensures up to 5 years of operation without replacement.
