

Combination lock with code and card vG-PC1

REMOTE CONTROLLED LOCK FOR APARTMENTS

The vG-PC1 combination lock is a simple and elegant solution to control access to apartment offices and any rooms to which we want to increase the level of security. The main task of the vG-PC1 code lock is to supervise and provide access to a selected room by means of a code or card. The vG-PC1 combination lock is available in an overlay version - it means that it works with most mortise locks. The operation of the lock is intuitive and very easy to learn. The administrator issues a code or card to a selected person in a simple and fast way. Our combination lock is easy to install and fits virtually any door, and its solid construction guarantees long and reliable operation.

MAIN FEATURES

- ② Opened via code or Master card
- ② The lock can add 50 different user codes in the range of 4-6 digits and 200 proximity cards
- ② The lock has a touch keyboard which is awakened from sleep mode by pressing the CARD button
- ② The lock has the DAILY MODE function - the handle is active for any time
