

Servicekey card

UZ-CX2350

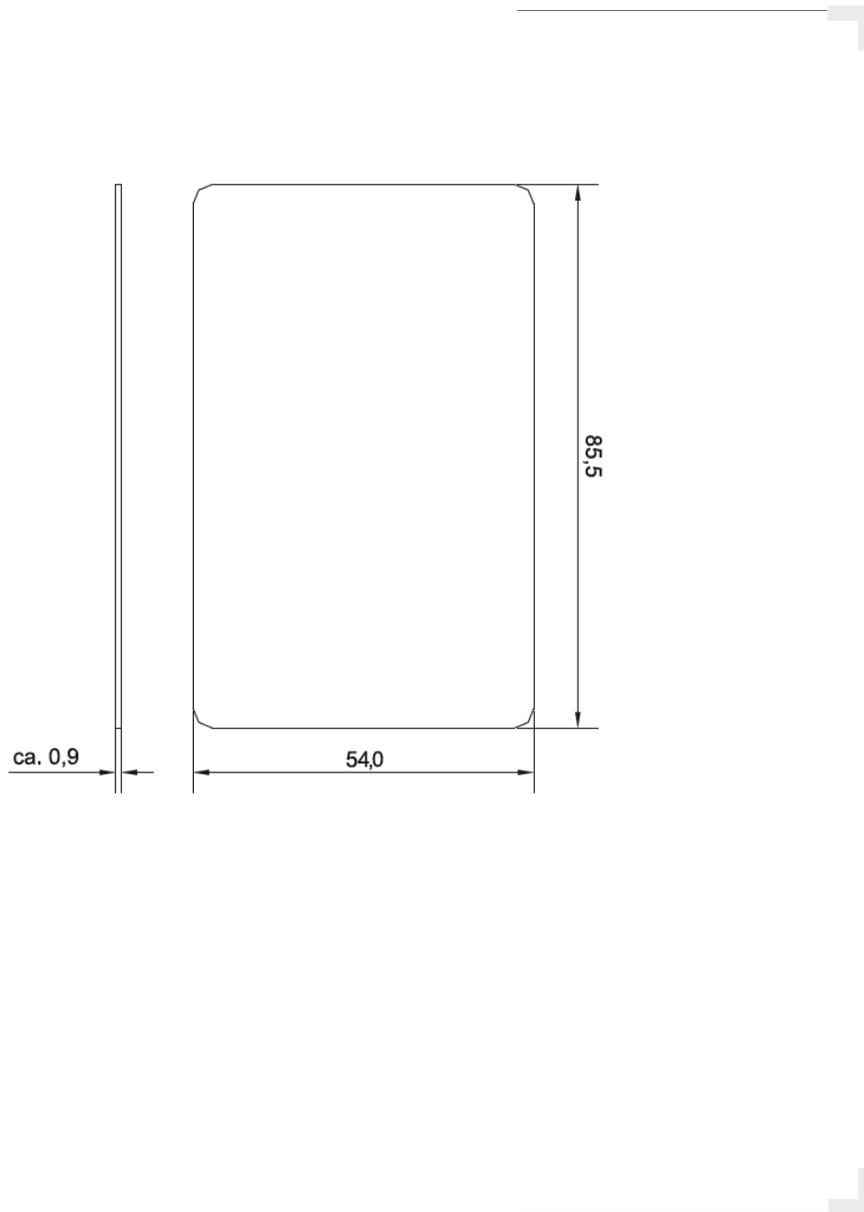

SERVICEKEY CARD

The Servicekey UZ-CX2350 card serves as the programming key in the private Clex system. It allows access to the device's memory, and therefore serves as a door-to-door authentication, e.g. to read event logs or perform service functions, such as adding user cards. The service key works as a passive transponder without its own power supply. If the original service key is lost, it can be replaced with a service key. The Clex service key can be used several times as a clone.

MAIN FEATURES

- ⊕ Programming key
- ⊕ Compatible with MIFARE® and LEGIC® 13.56 MHz
- ⊕ Compatible with EM and HITAG 125 kHz
