Programator
HT-Card Encoder

PROGRAMATOR HT-CARD ENCODER

HT-Card Encoder is a programmer of RFID transponders, it has compatibility with proximity technology with a frequency of 13.56MHz. It is very simple to use, communicates with a computer via a USB port.

WORKING MODES

⊙ Programmer mode - when the device is in programmer mode, the visual indicator will light up green. This allows, for example, adding new cards or reading their permissions.

⊙ Reader mode - the device can work as a regular RFID reader (the visual indicator will light up blue).

TECHNICAL DATA

Model Dimensions	HT-Card Encoder
Operating	70mm*70mm*26mm
Frequency	13.56 MHz System
Communication	TTlock USB typu C
Power interface	
Power supply	DC5v /500mA CE,
Certifications	FCC
