

Smart lock vG-BL Automatic

SMART LOCK

The vG-BL Automatic smart lock works on the TTlock mobile application. It is mounted on the inside of the door, making it completely invisible from the outside. Automatically turns the insert together with the key, which allows you to close the door on all triggers. It allows you to change an ordinary lock into a smart one. It can work with an external PIN code reader, remote control, door sensor or vGateway series gates. It has the function of emergency opening with a mechanical key.

MAIN FEATURES

- ⌚ It turns an ordinary lock into intelligent one
