

## Remote lock for a code for apartments

### vG-BL8 F2

#### REMOTE LOCK FOR THE APARTMENTS

The vG-BL8 F2 apartment code handle is our latest model from the vG-Lock series of remote locks. It is characterized by a very modern and minimalist design. The handle has a very narrow signboard with a width of 38 mm, which makes it possible to mount it on narrow-profile doors. vG-BL8 F2 electronic handle has spacing of 72mm. This electronic lock is operated using the TTlock and TThotel applications, in which it is possible to generate codes for a specified period of time, add proximity cards, check the history of events, check access and presence statistics of its users, and control the battery level. The vG-BL8 F2 sms code lock has a built-in mechanical insert for emergency opening and a special input for emergency power supply. This model can be used both in apartments for short-term rental, in hotels and in aparthotels (both offline and online).

#### PRODUCT MAIN FEATURES
