

#### HOTEL SWITCH

iT-03 is an intelligent hotel switch that works with RFID proximity cards - Mifare Classic 1-4 kB 13.56 MHz. The switch works with the hotel lock system. This means that a programmed card for a given room will turn on electricity only in that given room. In addition, after the end of the stay, the card will become inactive automatically, which will make it impossible to operate both the hotel lock and the switch. The iT-03 hotel switch is used in low-current networks with a voltage of 110-230 V AC. The hotel switch housing is made of ABS material, resistant to mechanical damage. Its minimalist design fits perfectly into any interior of both modern and classic hotel rooms. Thanks to the use of energy-saving hotel switches, savings on electricity can reach up to 20% per year, and in the case of rooms with air conditioning, even up to 30%.

## MAIN PRODUCT FEATURES

- ⊗ Power supply: 230V AC
- ⊗ Current: 30A
- ⊗ Load current: ≤ 16A
- ⊗ Material: ABS
- ⊗ Delay: ~ 30 seconds
- ⊗ Service life: over 100,000 cycles
- ⊗ Working temperature: -10 + 60 °C
- ⊗ Operating humidity: 10 ~ 95% RH °C
- ⊗ Flush-mounted switch for square box 80 / 80mm
- ⊗ White hotel switch
