

Digilock Cabinet Lock

Aspire Keypad

Digilock Aspire Keypad Cabinet Lock is a proven solution that operates with a code and works perfectly in both new and modernized installations. The lock is managed with electronic keys, which allow adding or removing user codes and opening the locker in case a code is forgotten. Operation is very simple, both for the user and the administrator. The lock is available in two versions: Basic and Advanced (the latter available at an additional cost). The Advanced version enables lock management via a dedicated tablet with an application that provides full control of the locks and allows audits to be carried out. The lock is powered by a battery that ensures up to 5 years of operation without replacement..

MAIN PRODUCT FEATURES

- ⊗ The lock operates with a code entered via a numeric keypad
- ⊗ Easy operation and lock management
- ⊗ Two user modes: "Shared Use" (pool/locker room) and "Assigned Use" (fixed assignment)
- ⊗ Visual and audio indicators for user-friendly operation
